Introduction to ModenaCam Performers

ModenaCam is the first commercial script to deliver turnkey solutions for adult/non adult videochat, pay per minute portals.

The performer's area is equipped with all the tools you need to entertain your guests and to earn money as efficiently as possible. Most of the features on that page should be self-explanatory. Nevertheless, we will go over the more complex ones in this document.

Minimal Requirements

Software Requirements
In order to broadcast on a ModenaCam portal, you need to have the latest version of a web browser, like Google Chrome or Mozilla Firefox. We highly discourage using Internet Explorer as it is known to have security issues and Flash-related bugs which have not been fixed in years. In addition, you need to have the latest version of Adobe Flash Player (update it here). If you want to stream in High Definition, you also need to install Adobe Flash Media Live Encoder (highly recommended).

Hardware requirements
Dual Core CPU, 2GB of Ram, Microsoft Windows Vista or newer, Apple OS X Snow Leopard or newer, a Flash-compatible webcam (external cam, embedded cam or any other kind of cam compatible with your operating system), and 1mbps of upload bandwidth.

Going Live

You can go live in 2 different ways: using the web based encoder or using the Adobe Flash Media Live Encoder (referenced as FMLE from now on). The interface and the functionality remains exactly the same regardless of which encoder you choose, the only thing affected being the video quality.
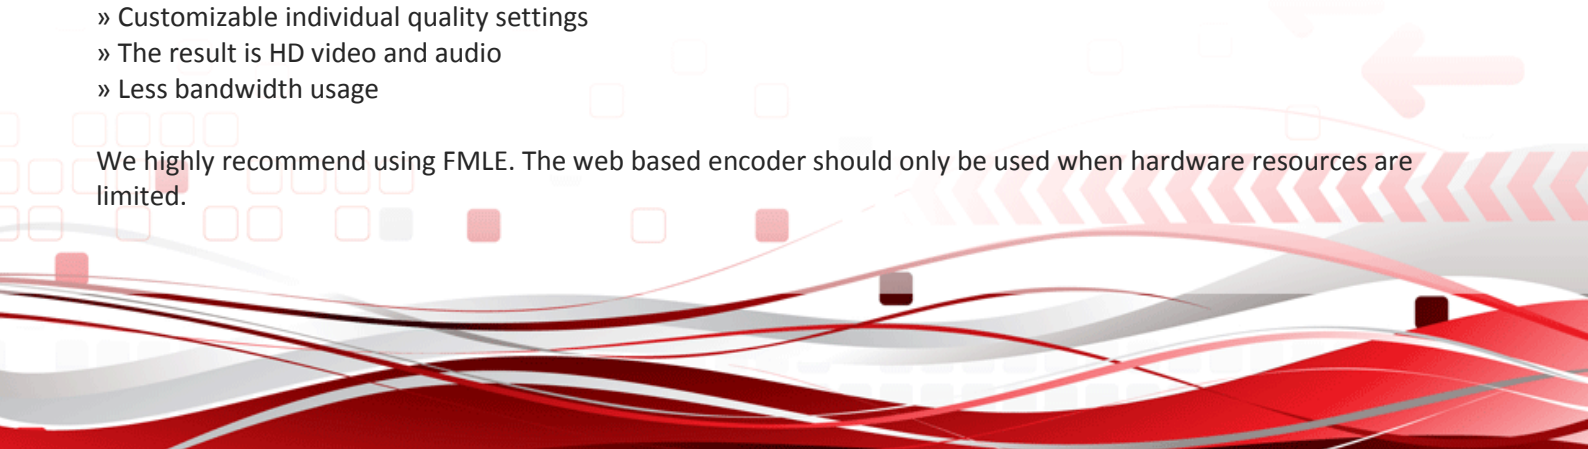

Web based encoder advantages:
» Does not require 3rd party apps or plug-ins
» Automated bandwidth selection based on speed test
» Pre-set Low, Medium and High quality settings
» Low resource usage

FMLE encoder advantages:
» H.264/MP3 video/audio encoding technology
» Customizable individual quality settings
» The result is HD video and audio
» Less bandwidth usage

We highly recommend using FMLE. The web based encoder should only be used when hardware resources are limited.

Going live using the web based encoder

1. Log in with your performer account.

2. Click the "Go Online!" link.

3. Press the button below "Go online now!".

4. Press the button corresponding to the quality scheme which best suits your internet connection. We recommend using the low setting if your upload bandwidth is below 1mbps.
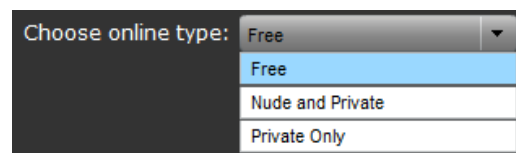

5. Select the webcam you want to broadcast with. Where available, you can also broadcast using up to 3 webcams at the same time.

6. Choose the audio source and the volume of the broadcast.
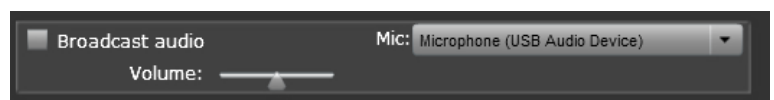

7. Select the type of session which you would like to create. You can read more about these in the "Live chat sessions".

8. Finally, press the "Go Online" button in order to actually be listed as online in the main site.
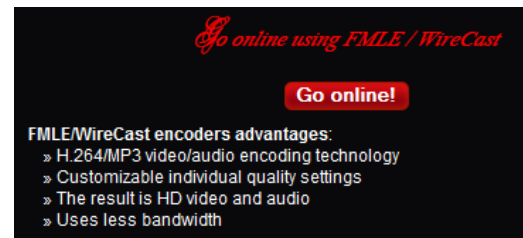

Going live using the Flash Media Live Encoder

1. Log in with your performer account.
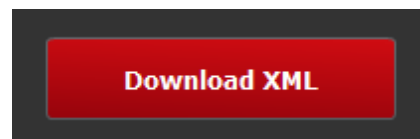

2. Click the "Go Online!" link.

3. Press button below "Go online using FMLE/WireCast".

4. Select the type of session which you would like to create. You can read more about these in the "Live chat sessions".

5. Press the Download XML button.

6. Save the file to a convenient location.

7. Run Adobe Flash Media Live Encoder

8. Go to File > Open profile and open the recently saved XML file.
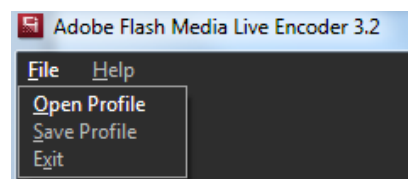

9. Click OK on the Profile Validation notice. Select the webcam and audio device you'd like to broadcast with.

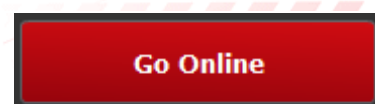

10. Edit the quality settings inside FMLE (experienced users only).
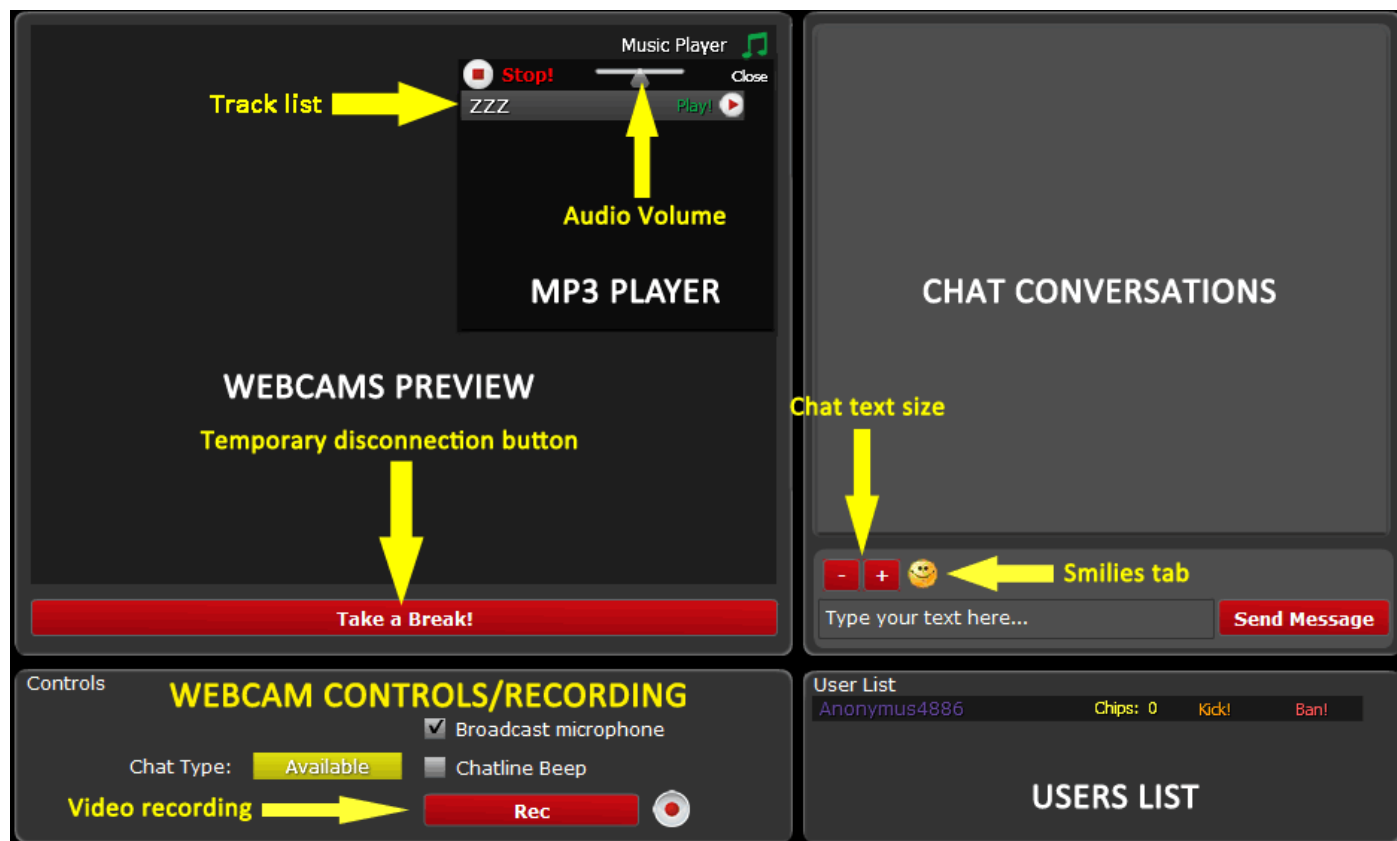

11. Press the Start button.

12. Finally, press the Go Online button from the previous ModenaCam pop-up.

The Live Chat Interface

The live chat interface has been designed to be as intuitive as possible.

The webcams preview will display the cameras you are broadcasting with.

The music player is synchronized so that all the users will hear the music in real time, encouraging striptease shows and dancing.

The 'Take a Break' button disconnects you from the site along with all the users in your chat room.

You can record as many videos as you like. They will show up in My Settings > My Videos page and by default they will be set as free videos, meaning that any user will be able to watch them.

The 'Chatline Beep' will produce a sound every time someone types something in the chat window.

The 'Broadcast microphone' option mutes/unmutes your microphone.

The 'Chat Type' dropdown displays your current session type. 'Available' means there is no one in your chatroom, 'Free' means there is at least one user in free chat, 'Private' means you have a paying user in a one-on-one show and 'Nude' means you have at least one paying customer in a nude chat session.

During private shows you can view the customer's webcam, in cam-2-cam. When the user is broadcasting his webcam, you can enable his stream by clicking on "Open viewer's video".
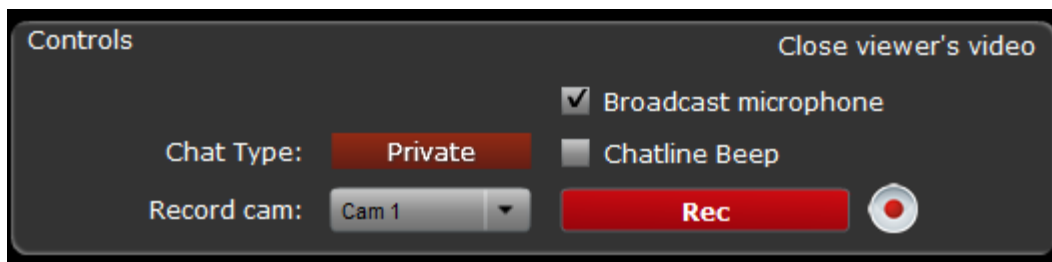

Settings

The "My Settings" tab allows you to change certain options, private details and edit your profile.
The pricing tab defines the costs for different paid sessions the users will be charged with. Please note that the site owner and the managing studio's commissions will be subtracted from this amount and the remainder will be added to your account.
You can create both free and paid photo galleries. Customers will pay a one-time fee which will give them access to all the photos in a paid gallery, at any time, whereas videos are sold individually.
The "My Payments" tab displays the earnings list for each payment period and the actual generated payments with all the details included. Please note that all listed values represent the exact amount you will receive as payment.

Live Chat Session Types

- Multiple users, free chat: this allows multiple users to chat with the performer free of charge.
- Multiple users, paid chat: multiple users are billed to chat with the performer. In this case, "Free Chat" is automatically changed to "Nude Chat" on the home page buttons.
- 1 on 1, paid chat: when a performer starts a true private chat show with a user, causing all other users to be disconnected, she will no longer be available on the home page. Once the private chat ends, the performer's status is changed to "Dress Mode", and then she can go online again once she is ready.
- 1 on 1 with others peeking, paid chat: "Peek Mode" allows other customers to "spy" on private sessions at a lower cost. Peeking customers do not have access to text chat.

You can create specific chat session types: Free, Nude and Private, Private Only.
If you select the first option (Free), you will receive users in free shows, with the possibility of upgrading to Private/True Private shows, whereas if you select the 3rd option (Private Only) you cannot receive users in Free chat. The 2nd option (Nude and Private) allows nude sessions (multiple users, paid chat) with the possibility of upgrading to the more expensive Private/True Private show.

Nude shows should be cheaper than Private shows, as they have a higher income potential compared to Private chat sessions. For example, if you sell Nude for $1/minute and Private for $2/minute, then a Nude show will earn you more money if you have more than 2 users online at the same time.

The same is valid for Private + Peek shows.

Peek and Nude are extremely different and it's up to your skill/pricing settings to drive the users into Nude rather than Private. If the user wants Private, you can earn more if you have users in Peek mode.

Other Paid Session Types

1. Paid videos – you can record both free and paid videos. By default, a recorded video is set as free and can be seen by anyone on your profile. If you change it into a paid video, users will be charged on a pay per view basis. Once a user has paid for a video, he will be able to view it any number of times without having to pay extra.

2. Paid photo gallery – users who subscribe to your paid photo gallery will have access to all existing images as well as new ones. They will have access to the gallery for an undefined period of time.

3. Tips – users can tip you during any type of live chat session. When a tip is sent, a notification containing the amount and the tipper's nickname will be displayed to all the users so that they will be encouraged to do the same. All earnings are subject to the site's and the studio's commissions.

Ratings & Reviews

After all paid sessions, your clients will be able to rate and review your performance. All reviews will be posted and visible in your public profile.
